

◇ Couchdrop

The modern platform for b2b file transfers, file-based automation, and data flows – simple, secure, and built for the cloud.

Couchdrop is a SaaS file transfer platform that connects with the platforms modern businesses are using, allowing organizations to simplify and automate secure b2b transfers across storage platforms, cloud data warehouses, iPaaS workflows, and more.

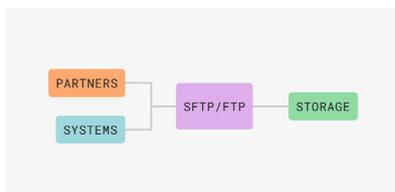

No infrastructure management. No custom coding or plug-ins. No complications.

Couchdrop is SFTP and MFT modernized.

- ✓ No hardware or VMs required
- ✓ Automatic scaling & updates
- ✓ 50+ platform integrations
- ✓ Enterprise-grade security controls
- ✓ No temporary storage layer
- ✓ Personalized support included

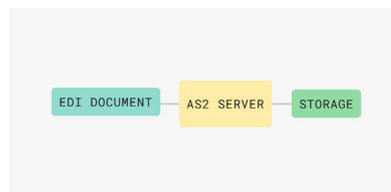

FILE TRANSFER PLATFORM

All the tools you need to simplify and streamline your MFT, SFTP and file transfer automations in the cloud.

Cloud File Transfer Server

Couchdrop enables SFTP and FTP access to cloud storage with zero infrastructure.

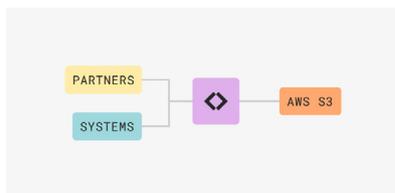

AS2 EDI Gateway

Create AS2 Stations and Outbound AS2 folder for EDI file exchange directly to cloud storage.

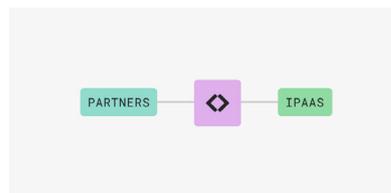

HTTPs File Gateway

A simple, secure way to upload data directly to your storage environment over HTTPS.

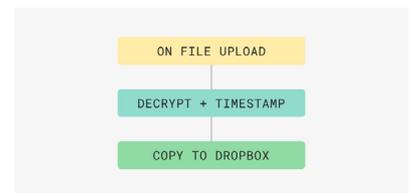

S3 Gateway

Connect AWS S3 and S3-compatible platforms to use as endpoints for secure file exchange.

iPaaS Bridge

Securely ingest files from external partners and send them to internal iPaaS flows.

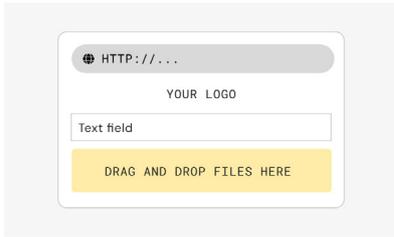

Automated File Transfers

Automate file transfers and scheduled actions using a flexible workflow builder.

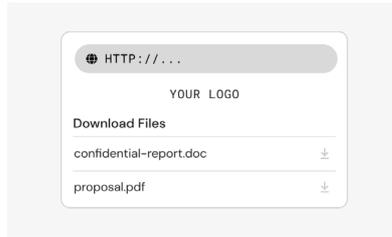

SECURELY SEND & COLLECT FILES

Securely send and receive files without sharing storage account access.

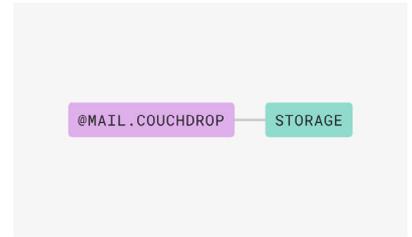

Upload Portals

Collect and accept files securely using brandable web forms that deliver files into cloud storage or workflows.

Shared Links

Shared links let you give clients, partners, and other external parties access to specific files or folders in a simple, secure, and auditable way.

Mailboxes

Dedicated email addresses that automatically strip email attachments and save them directly to a connected storage directory.

INTEGRATIONS

Couchdrop has native integrations with over 50 platforms and can connect to any storage endpoint that supports SFTP, FTP, AS2, or S3 connections.

Cloud Storage

SharePoint, Dropbox, Google Workspace + more

IPAAS

Boomi, Celigo, Workato + more

Object/Block Storage

Amazon S3, Azure Blob Storage + more

System Integrations

Snowflake, Big Query, Google Pub/Sub + more

File Servers

Windows Server, Mac OSX Server

Logging & SIEM

DataDog, Splunk, Microsoft Sentinel + more

SECURITY & COMPLIANCE

- ✓ End-to-end encryption
- ✓ SSO, MFA/2FA, and SIEM integrations
- ✓ Granular access and feature controls
- ✓ Intrusion detection and configurable firewall
- ✓ Over 99.99% uptime with no security breaches
